Why Choose Packer Engineering?

The Packer Engineering team is comprised of engineers and technicians trained and skilled at cookware testing. They undertake each assignment only after conducting a thorough and critical analysis of the clients' needs and a formation of their specific scope of work, time-line, and budget.

We provide the following services:

- FDA compliance evaluations
- Non-stick testing per CMA 21.0 standard
- Design evaluations and human factors analyses
- Cookware handle evaluations
- Materials evaluations: base and coating, corrosion analyses, heavy metal inclusions & metallurgical analyses

Engineering Consulting

for the Cookware Industry

In 1997, the Cookware Manufacturers' Association embarked on developing a non-stick cookware and bakeware standard for use as a guide to aid the manufacturer, the user, and the general public. Packer Engineering assisted in developing the CMA 21.0 standard, "Non-Stick Finishes on Cookware and Bakeware" which the association adopted.

To learn how your company can enhance or supplement its testing laboratory, efficiently and economically, please call us at 800-323-0114.
